

# YOUR PUMP & DREDGING SPECIALIST

We cater for all sectors of industry including underground and surface mining, quarrying, construction, wastewater, energy, petrochemical, oil and gas, engineering, agriculture and general industry across Africa.

We are known for our agility with a proven track record of offering customers quick and easy access to a comprehensive range of dewatering pumps, heavy duty slurry handling pumps, dredging and hydro mining solutions either for **outright purchase or rental**.

## Small Portable Pump Sets

Our small portable pump sets are lightweight and easy to move on site yet engineered for the toughest applications. Available in petrol, diesel or electric drive.

## Submersible Dewatering Pumps

Submersible pumps are an effective, inexpensive solution for dewatering whether on an opencast mine or quarry site, in an underground mine, on a construction site or anywhere else that dewatering needs to be done.

## Diesel Driven Dewatering Pump Sets

Our self-priming diesel driven pump sets are suitable for dewatering applications where power is not readily available. Available as standard import or as local custom engineered.

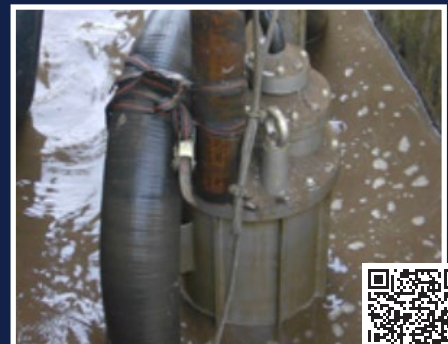

## SlurrySucker Dredging Solution

The SlurrySucker Dredging System is suitable for the regular cleaning of process water ponds, return water dams or other water storage areas. It is also ideal for dredging and cleaning water capture areas where silt or slimes is an issue or where water retention and water holding capacity is being threatened.

## Hydro Mining Solutions

The locally manufactured SlurryBlaster is purpose-engineered for removal of slurry and sediment accumulation on dam walls and inside dams. It will assist mines with on-going maintenance. It offers mining and plant operations a cost effective cleaning tool for all applications where slurry has become an issue and needs to be washed away.

## Heavy Duty Slurry Handling Solutions

Heavy duty slurry handling solutions from global supplier, Toyo provide high performance pumping of slurries including those with solids that have settled out of fluid suspension. Toyo heavy duty slurry pumps move material in applications not previously considered pumpable.
